Real Estate Salesforce Package – Website Brief

Prepared by: Vishakha Kumari | Version 1.0

1. Purpose of This Document

This brief tells the developer and designer **what the website should look like and how visitors should experience it**. It is written in plain language and does not prescribe technology; it describes pages, content, behaviour and the feel of the site.

The website promotes **a Salesforce package built for real estate companies**. The package helps them manage their **leads, sales and bookings** in one place. The website has one main job: **explain the package's features and benefits clearly and persuade visitors to request a demo.**

2. About the Package

The package runs on Salesforce and gives real estate companies a ready-made way to run their sales operation. The website presents it through three core areas, plus supporting capabilities.

Area	What it helps a real estate company do	What the website should show
Lead Management	Capture enquiries from every source, assign them to sales reps, track follow-ups and site visits	Screenshots of the lead list and lead record, a simple lead-journey graphic
Sales Management	Move prospects through a sales pipeline, manage offers and deal progress, see who is closing what	Pipeline view, deal stages, sales team performance
Booking Management	Manage availability, hold and book units or properties, track booking status and payment milestones	Availability and booking screens, a booking-journey graphic

Area	What it helps a real estate company do	What the website should show
Reports and Dashboards	See leads, sales and bookings at a glance for managers and owners	Dashboard screenshots with clear, readable numbers
Built on Salesforce	Work on a platform real estate teams and IT already trust, with access on desktop and mobile	"Built on Salesforce" message and, where permitted, AppExchange listing link

The product team supplies the exact feature names and wording (see Section 11). The website must make it easy to update them.

3. Business Goals

1. Generate demo requests. This is the primary goal, and every page should lead towards it.
2. Build trust and credibility with real estate companies and the Salesforce teams that support them.
3. Explain the features and benefits so a visitor understands the value in under two minutes.
4. Send visitors to the AppExchange listing where relevant.
5. Give the sales team clean, complete lead information from every demo request.

How we will measure success: number of demo requests per month, percentage of visitors who submit the demo form, time spent on the Features page, visits that come from the AppExchange, and how many visitors come back.

4. Who Will Use the Website

Visitor type	What they want to know	What they should do
Real estate developers and builders	Can this manage our leads, unit bookings and sales team in one place?	Request a demo
Real estate brokerages and agencies	Will this help our agents follow up faster and close more deals?	Request a demo

Visitor type	What they want to know	What they should do
Sales heads and managers	How do I see my pipeline, team performance and bookings?	Request a demo
Owners and directors	What is the business benefit, cost and risk?	Request a demo or contact sales
Salesforce admins and IT teams	Does it fit our Salesforce setup, how is it installed, and is it secure?	Read the technical overview, then request a demo
Salesforce consultants and partners	Can I recommend or implement this for my clients?	Contact sales

5. Overall Look and Feel

- **Style:** Modern, clean, professional and trustworthy, in the style of good business software. Plenty of white space; not cluttered.
- **Mood:** Confident, helpful and straightforward. It should feel like a tool that makes a sales team's day easier.
- **Colours:** Use the company brand colours: one primary colour, one bright accent colour reserved for the "Request a Demo" button, and neutral greys and white elsewhere. The brand colours and logo come from the business team (see Section 11).
- **Product screenshots:** The product is the hero. Show clean, real screenshots of the leads, sales and bookings screens in simple device frames, with sample data that looks realistic and contains no real customer information.
- **Photos:** Real, high-quality images of homes, buildings and real estate sales teams at work. Avoid obviously fake stock photos.
- **Fonts:** One clean, easy-to-read font family for headings and body text. Large headings, comfortable body text size.
- **Buttons:** The main "Request a Demo" button must look the same everywhere, stand out from the rest of the page and use the accent colour.
- **Icons:** Simple, consistent line icons for features and benefits.
- **Motion:** Light, subtle animations only (gentle fade-ins, hover effects). Nothing that slows the page or distracts.
- **Salesforce name and logo:** Use of the Salesforce name, logo or AppExchange badge must follow Salesforce's brand guidelines.

6. Site Map (Pages and How They Connect)

1. Home
2. Features (with a section each for Lead, Sales and Booking Management, and Reports)
3. Benefits
4. Who It Is For
5. How It Works
6. Security and Salesforce Fit
7. Pricing (or "Contact us for pricing")
8. Customer Stories
9. Request a Demo (the key page)
10. Resources (blog, guides, release updates)
11. FAQ
12. About Us
13. Contact Us
14. Legal pages: Privacy Policy, Terms of Use, Cookie Notice

7. Elements on Every Page

7.1 Header (top of page)

- Company and product logo on the left (clicking it returns to Home).
- Menu: Features, Benefits, Who It Is For, How It Works, Customers, Resources, About, Contact.
- A prominent **"Request a Demo"** button on the right.
- The header stays visible when scrolling so the demo button is always reachable.
- On mobile, the menu collapses into a simple menu icon, and the demo button stays visible.

7.2 Footer (bottom of page)

- Logo and a one-line description of the package.
- Quick links to all main pages and the AppExchange listing.
- Contact details: email, phone, office address.
- Social media icons.

- Legal links and copyright.
- A smaller "Request a Demo" prompt.

7.3 Floating help

- A small chat or WhatsApp button at the bottom-right corner so visitors can ask a quick question.

8. Page-by-Page Description

8.1 Home Page

Goal: Make a strong first impression and send visitors to the demo form.

Sections from top to bottom:

1. **Hero banner:** A big headline stating the main promise (for example, *"Manage every lead, sale and booking in one place, on Salesforce"*), a short supporting sentence, and two buttons: **Request a Demo** (main) and **See Features** (secondary). Beside or behind the text, a large product screenshot or a short product video.
2. **Trust strip:** Logos of customers or partners, a "Built on Salesforce" mark, and a link to the AppExchange listing. Headline numbers may be added once the business team provides them.
3. **Three core areas:** Three large cards for Lead Management, Sales Management and Booking Management, each with an icon, a one-line description and a screenshot. Each card links to its section of the Features page.
4. **Benefits section:** Three or four big benefits (for example, never lose a lead, close deals faster, see every booking at a glance), with a simple picture for each.
5. **From enquiry to booking:** A simple visual that follows one customer through the package: enquiry arrives, sales rep follows up, deal progresses, unit is booked.
6. **How it works:** A simple four-step visual (for example, 1. Book a demo, 2. We set it up for your team, 3. Your team is trained, 4. Go live).
7. **Testimonials:** Two or three customer quotes with name, photo and company.
8. **Final call to action:** A colourful band with a short message and the **Request a Demo** button.

8.2 Features Page

Goal: Show exactly what the package can do, in the order a real estate sales team works.

- A short introduction at the top.
- One clear section for each area: Lead Management, Sales Management, Booking Management, and Reports and Dashboards.
- For each feature: an icon or screenshot, a short title, a two-to-three line description, and a "what this means for you" sentence.
- A sticky side menu or tabs so visitors can jump between the areas.
- A "Works on Salesforce" section covering mobile access and how the package fits with the rest of a company's Salesforce.
- A **Request a Demo** button after every area.

8.3 Benefits Page

Goal: Explain the value in business terms, not product terms.

- Organise by role (sales head, sales executive, owner or director, Salesforce admin).
- Each benefit has a bold headline, a short explanation and, where possible, a number or proof (for example, "Faster lead response"). Figures come from the business team.
- A simple "Before vs After" comparison showing life with spreadsheets and scattered tools against life with the package.
- A **savings calculator** where the visitor enters a few numbers (sales team size, leads per month) and sees an estimate of time saved and deals recovered.

8.4 Who It Is For Page

- Short sections for real estate developers and builders, brokerages and agencies, and sales and management teams.
- Each section describes the typical daily challenge and how the package solves it, with a matching screenshot and a **Request a Demo** button.

8.5 How It Works Page

- A visual step-by-step journey from "Request a demo" to "Go live".
- Estimated time for each step.
- Short explanation of installation, set-up, training, data migration from spreadsheets or other tools, and ongoing support.

- Call to action: Request a Demo.

8.6 Security and Salesforce Fit Page

This page is mainly for Salesforce admins and IT teams.

- Plain-language explanation of how the package works with a company's Salesforce, and where the data is kept.
- How access is controlled and how data is protected.
- Which Salesforce editions the package works with and how it is installed.
- Link to the AppExchange listing and to support or documentation.
- A short checklist for IT teams, and a contact option for technical questions.

8.7 Pricing Page

- Either two to three plan cards (name, who it is for, key features, price or "Contact us") or a message saying pricing depends on team size and a demo will clarify it.
- A comparison table of what is included in each plan.
- A short list of pricing questions and answers.

8.8 Customer Stories

- Cards with customer photo, company, quote and one key result.
- Click a card to read a full short case study (problem, solution, result).
- Optional customer video.

8.9 Request a Demo Page (Most Important Page)

Goal: Make requesting a demo quick, easy and reassuring.

Layout: Two columns on desktop (stacked on mobile). Left: headline, three or four bullet points on what the visitor will get from the demo, a testimonial and trust logos. Right: the form.

Form fields (keep it short; fewer fields means more submissions):

Field	Required?	Notes
Full name	Yes	
Work email	Yes	Must check the format is valid

Field	Required?	Notes
Phone number	Yes	Include country code selector
Company name	Yes	
Job title / role	Optional	
Type of company	Optional	Dropdown: developer or builder, brokerage or agency, other
Number of sales team members	Optional	Dropdown: 1–10, 11–50, 51–200, 200+
Do you use Salesforce today?	Optional	Dropdown: Yes, No, Evaluating
What are you most interested in?	Optional	Tick boxes: Lead Management, Sales Management, Booking Management, Reports and Dashboards
Preferred date and time for the demo	Optional	Date picker and time slot
Anything else you'd like us to know?	Optional	Short text box
Consent to be contacted	Yes	Tick box linked to Privacy Policy

Behaviour:

- Clear error messages next to any field that has a problem, in friendly wording.
- A spam protection step that does not annoy real visitors (for example, an invisible check).
- After submitting, show a **thank-you message** ("Thanks! We'll contact you within one business day.") with what happens next.
- The visitor receives a **confirmation email**; the sales team receives an **instant notification** with all the details.
- Each demo request should be saved automatically as a lead in the company's own Salesforce, so the sales team can follow up straight away.
- Let the visitor pick a slot directly from the sales team's calendar and receive a calendar invite.
- Option to choose "online demo" or "in-person demo".

8.10 Resources

- Articles, guides, real estate sales tips, release updates and downloadable checklists or brochures.
- Visitors can download a guide by entering their email, which creates a lead.
- Easy sharing to social media and a newsletter signup box.

8.11 FAQ Page

- Questions grouped by topic (product, Salesforce requirements, set-up, data migration, pricing, security, support).
- Click-to-expand answers and a search box at the top.
- "Still have questions? Request a demo or contact us" at the bottom.

8.12 About Us Page

- Company story, mission and values.
- Photos and short bios of the leadership team.
- Company milestones or timeline.
- Awards, certifications, Salesforce partner status or media mentions.
- Careers link.

8.13 Contact Us Page

- Simple contact form (name, email, phone, message, topic).
- Email, phone, WhatsApp and office address(es).
- Embedded map showing the office location.
- Business hours.
- Links to social media.

8.14 Legal Pages

- Privacy Policy, Terms of Use and Cookie Notice, linked from the footer and from the forms.
- Cookie consent banner on first visit.

9. Extra Features That Add Value

These features go beyond the core requirements and are recommended to strengthen the site.

#	Feature	Why it helps	Priority
1	Product video or animated walkthrough on Home and Features	Shows the package quickly; people understand faster than by reading	High
2	Interactive product tour (click-through screenshots of leads, sales and bookings)	Lets visitors "try" the package before the demo	High
3	Online demo booking with the sales team's calendar	Removes back-and-forth emails; more demos booked	High
4	Automatic confirmation and reminder emails	Reduces no-shows	High
5	Demo requests saved automatically as leads in the company's Salesforce	No manual copying; faster follow-up	High
6	Customer testimonials and case studies	Builds trust	High
7	Live chat or WhatsApp button	Captures visitors who are not ready for a demo	High
8	AppExchange listing link, badge and reviews	Adds third-party proof and sends visitors to install	High
9	Savings calculator	Turns benefits into numbers	Medium
10	Free trial or sandbox request option	Lets interested companies test the package	Medium
11	Downloadable brochure (with email capture)	Collects leads who are not ready to book	Medium
12	Release updates page (what's new in the package)	Shows the product is actively improved	Medium
13	Customer login or support link in the header	Existing customers can find help quickly	Medium

#	Feature	Why it helps	Priority
14	Webinar and event sign-up	Builds a pipeline of warm leads	Medium
15	Newsletter signup	Keeps prospects engaged	Medium
16	Multi-language support	Reaches more customers	Medium
17	Comparison page (package vs. spreadsheets or other tools)	Helps decision makers	Low
18	Exit-intent pop-up offering the demo or a guide	Recovers visitors who are about to leave	Low

10. Experience Requirements

10.1 Mobile and Tablet

- Many visitors will use phones, so the site must look and work well on mobile, tablet and desktop.
- Buttons and links must be big enough to tap easily.
- Forms must be easy to fill on a phone (right keyboard for email, phone and so on).
- Product screenshots must stay readable on small screens.

10.2 Speed

- Pages should feel quick to open. Images and videos must be sized and compressed properly.
- Show a simple loading indicator if something takes time.

10.3 Easy to Use and Accessible

- Text must have enough contrast against the background and be readable by people with low vision.
- All images need descriptions for screen readers.
- The site must be usable with a keyboard only.
- Clear, jargon-free wording; explain Salesforce terms where they appear.
- Visitors should reach the demo form within **one or two clicks** from any page.

10.4 Trust and Security

- Secure connection (padlock) on all pages.
- Privacy policy and consent visible near every form.
- Personal data from forms stored safely and visible only to authorised staff.

10.5 Findability (Search Engines)

- Each page should have its own clear title and short description for Google.
- Clean, readable page addresses (for example, /features).
- Content written so that people searching for real estate CRM, lead management or booking management on Salesforce can find the site.

10.6 Tracking and Reporting

- Track page visits, button clicks, demo form submissions and visits from the AppExchange so the business can see what is working.
- Show a simple report of demo requests per week and month to the business team.

10.7 Easy Content Updates

- The business team should be able to change text, screenshots, testimonials, resources and FAQs themselves without calling a developer.
- Demo requests should be viewable in a simple list that can be exported to Excel.

11. Content Needed From the Business Team

The developer cannot start the final design without these:

- Product name, company logo and brand colours
- Final list of package features with short descriptions, grouped by Lead, Sales and Booking Management and Reports
- Screenshots or a demo video of the package, using sample data
- List of benefits and any proof points (numbers, results)
- AppExchange listing link and any ratings or badges that can be shown
- Supported Salesforce editions, installation steps and security wording
- Customer logos, testimonials and case studies (with permission)
- Team photos and company story

- Contact details and office address
- Privacy Policy and Terms text (from the legal team)
- Pricing information (or the decision not to show it)
- Tone of voice guidance (formal or friendly)

12. Out of Scope for Version 1

- Public property search or listings for buyers and renters (this website promotes the package only)
- Customer login area or self-service portal
- Online payments or online purchase of the package
- Changes to the Salesforce package itself

Any of these can be added in a later phase.

13. Acceptance Checklist (How We Know It Is Done)

- [ ] All pages in Section 6 are built and linked in the menu and footer.
- [ ] "Request a Demo" button is visible on every page and works.
- [ ] Demo form validates entries, shows the thank-you message, sends the confirmation email to the visitor and a notification to the sales team.
- [ ] Product screenshots for Lead, Sales and Booking Management are shown on the Home and Features pages.
- [ ] Site looks correct and is easy to use on phone, tablet and desktop.
- [ ] Pages open quickly and images are clear.
- [ ] Brand colours, logo and fonts are applied consistently.
- [ ] Salesforce and AppExchange names, logos and badges follow Salesforce's brand guidelines.
- [ ] Content can be edited by the business team without a developer.
- [ ] Cookie banner, Privacy Policy and Terms are in place.
- [ ] Tracking of visits and demo requests is working.
- [ ] Business team has reviewed and signed off on every page.

14. Document Approval

Role	Name	Date	Sign-off
Business Analyst			
Product Owner / Business Sponsor			
Designer			
Developer
